Dear ams OSRAM hiring team,

I am applying for the Agentic AI Engineer role in Lisbon. I build AI agents and LLM-driven workflows that run in production and connect to real business systems, which is the core of what this role asks for.

At FlowSpace, I built and operate an AI listing bot that takes a workspace brochure in any format, PDF, website, photo or spreadsheet, extracts structured data with an LLM, and drafts a full listing with a human review step before it reaches the backend. I also built support AI agents that answer customer queries from live platform data and escalate to a person when confidence is low, and I shipped API integrations with OfficeRnD and Nexudus for automated bookings, plus CRM and GTM automations for lead capture, enrichment and routing.

At UltraStrategy, I built a CV-parsing pipeline integrated into the platform: a user uploads a CV, the pipeline extracts the data and scores how relevant that person is for specific types of roles, the result is shown in the frontend, and a standardised profile is then generated. Affinda and the Claude API handled the parsing and generation, and the extraction tool itself was built with n8n and Eden AI, which is close to the RAG and prompting work this role needs. I also hold the Microsoft Copilot Studio Agent Academy and Microsoft Power Automate certifications.

My production stack is TypeScript, Python, n8n and LLM APIs, and I use Claude Code daily. I hold Italian EU long-term resident status. I am not currently authorised to work in Portugal and would need the applicable employer-side permit or sponsorship process; I am ready to relocate to Lisbon and complete that process, and available immediately.

Regards,
Prabhavit Gupta
