Dear Anyone AI team,

I am writing to apply for the Python Developer role. Python, TypeScript and Node.js are part of my core stack, and I have hands on experience debugging, refactoring and migrating production codebases, which matches the kind of project work this role is scoped around.

At FlowSpace, a workspace marketplace, I led the migration of the platform off a legacy stack onto Next.js and Laravel while the product stayed live. I mapped the old data structure to the new one, chose the migration path per entity through API endpoints or CSV exports, and drove the cutover as the platform grew from 2,000 to 4,500+ users. I also built the integrations with OfficeRnD and Nexudus for automated bookings, working through backend logic and API contracts entity by entity.

At Clubee, I integrated the Clubee API across the frontend and ran unit testing and QA on new features, alongside building shop, domain integration and federation dashboard tools. That work sits close to the testing, code review and debugging focus of this role.

I am comfortable navigating unfamiliar, multi file codebases, writing tests, and giving clear, actionable feedback in code review. I am based in Venice, Italy, hold an Italian EU Long Term Residence Permit, and can take on this remote, project based work on a flexible schedule from Italy.

I would welcome the opportunity to discuss how I could contribute to a project.

Regards,
Prabhavit Gupta
