Dear Hiring Manager,

I am applying for the AI Product Developer role at eduBITES.

At FlowSpace, I built AI-powered product features from idea to production using LLM APIs and AI-assisted development as my primary workflow. I built an AI data pipeline that ingests documents in any format (PDF, web page, spreadsheet, photo), extracts structured data using LLM APIs with agentic orchestration, and pushes validated results to the backend after human review. This system handles hundreds of different sources and formats. I use Claude Code daily as my primary development tool to rapidly prototype, validate, and iterate on product concepts. I built RAG-backed support agents with confidence scoring and human escalation, and shipped integrations against customer APIs and booking systems, iterating quickly on customer feedback.

eduBITES is building the future of AI-powered knowledge sharing, and the AI Product Developer role maps directly to how I work every day: building LLM-powered features from concept to launch, rapid prototyping with AI-assisted development tools, working with AI agents and emerging technologies, and owning products end to end. I bring hands-on experience building AI products, a strong bias toward shipping, and the habit of turning ideas into working software through fast experimentation and iteration.

I am based in Venice, Italy, hold an EU Long Term Residence Permit, and am available immediately. I am open to relocating to Berlin.

Regards,
Prabhavit Gupta
