Summary

Full-stack product engineer who ships production web products end to end in Next.js, TypeScript, and Node.js. At FlowSpace I built the company's AI data pipeline (document ingestion, LLM extraction with validation and guardrails, confidence scoring, human-in-the-loop review) and migrated a live marketplace from a legacy stack to a coded Next.js and Laravel product, scaling from 2,000 to 4,500+ users across multiple languages. I also built Urlink, a client SaaS platform from scratch, owning requirements, database design, payments integration, and deployment. I integrate AI APIs daily with careful attention to evaluation, reliability, and graceful failure handling. I work independently in remote environments, move quickly in early-stage ambiguity, and own features from database schema through UI.

- Built integrations against customer APIs and booking systems (OfficeRnD, Nexudus), CRM pipelines (Attio, Amplemarket, Swan), and payment flows (Stripe), iterating quickly on customer feedback.
- Took over a live marketplace on a legacy stack and worked with the team to migrate it to a coded Next.js and Laravel product. Scaled from 2,000 to 4,500+ users.
