Summary

Full-stack developer who builds and secures web applications across frontend and backend in production. At FlowSpace I built and maintained a Laravel API backend with PostgreSQL, implemented secure authentication flows (JWT, OAuth), and developed React and Next.js frontends that integrate with multiple backend services. I designed and built RESTful APIs handling user data, payment flows (Stripe), and third-party integrations with proper input validation and access control. I worked in agile sprints with cross-functional teams (backend, product, operations), owned features end to end from requirements through delivery, and wrote clean, documented code following existing conventions. I debug and resolve issues across the full stack, prioritize fixes collaboratively, and deliver tested solutions.
