Summary

Forward deployed engineer who works at the intersection of product, engineering, and customer operations to build software that solves real workflow problems. At FlowSpace I embedded with commercial and operations teams to identify bottlenecks, then built AI-powered automations, internal tools, data migrations, dashboards, and integrations that stripped manual work out of onboarding and customer success. I owned each solution end to end: scoping the problem with stakeholders, shipping production-ready TypeScript and React code, integrating customer APIs and booking systems, and iterating on reliability. I integrated OpenAI and Claude APIs into daily workflows for document extraction, structured data validation, and customer support automation with confidence scoring and human escalation. I thrive in ambiguous environments where the right answer is not obvious and move fast to unblock customers.

Experience

FlowSpace.co **Mar 2024 – Aug 2026**
Full-Stack & AI Engineer (Full-time, Freelance) *London, UK (remote)*

- Built an AI listing pipeline that takes documents in any format (PDF, web page, photo or spreadsheet), extracts structured data using LLM APIs with agentic orchestration and retrieval, and pushes validated results to the backend after human review. Handles hundreds of sources with different formats.
- Built RAG-backed support agents that answer customer queries against live platform data and escalate to a person on low confidence. Implemented confidence scoring and retrieval quality monitoring.
- Built integrations against customer APIs and booking systems (OfficeRnD, Nexudus), CRM pipelines (Attio, Amplemarket, Swan), and payment flows (Stripe), iterating quickly on customer feedback.
- Took over a live marketplace on a legacy stack and worked with the team to migrate it to a coded Next.js and Laravel product. Scaled from 2,000 to 4,500+ users.
