Summary

Front-end developer who builds React applications that handle real-time data and complex UI states in production. At FlowSpace I built React and Next.js interfaces that display live operational data, integrate with multiple backend APIs and services, and handle frequent state updates across data-heavy views. I built reusable component architectures with TypeScript, managed complex application state with continuous data refresh, and optimized rendering performance for views with high element counts. I integrate front-end with backend services and APIs, translate interface requirements into technical and design choices, and collaborate with cross-functional teams (backend, operations, product). I own features end to end: from requirements through component design, implementation, testing, and iteration on the integrated system.

Skills

- **Front-end development:** React, Next.js, TypeScript, JavaScript, component architecture, state management, real-time data rendering, HTML/CSS, responsive design, performance optimization, REST API integration, WebSocket data handling
- **Development tools & practices:** Git, GitHub Actions CI/CD, testing (Jest, Playwright), Docker, Linux, Vercel, AWS, code review, cross-functional collaboration
- **Full-stack & data:** Node.js, Python, SQL (PostgreSQL, MySQL, Supabase, Redis), API design (REST, webhooks, OAuth), real-time data pipelines, structured data extraction, OpenAI API, Claude API

Experience

FlowSpace.co **Mar 2024 – Aug 2026**
Full-Stack & AI Engineer (Full-time, Freelance) *London, UK (remote)*

- Built an AI listing pipeline that takes documents in any format (PDF, web page, photo or spreadsheet), extracts structured data using LLM APIs with agentic orchestration and retrieval, and pushes validated results to the backend after human review. Handles hundreds of sources with different formats.
- Built RAG-backed support agents that answer customer queries against live platform data and escalate to a person on low confidence. Implemented confidence scoring and retrieval quality monitoring.
- Built integrations against customer APIs and booking systems (OfficeRnD, Nexudus), CRM pipelines (Attio, Amplemarket, Swan), and payment flows (Stripe), iterating quickly on customer feedback.
- Took over a live marketplace on a legacy stack and worked with the team to migrate it to a coded Next.js and Laravel product. Scaled from 2,000 to 4,500+ users.
