Summary

Full-stack product engineer who ships end-to-end features in Next.js, Supabase, and Vercel. At FlowSpace I built the company's AI listing pipeline (document ingestion, LLM extraction, human-in-the-loop review) and migrated a live marketplace from a legacy stack to a coded Next.js and Laravel product, scaling from 2,000 to 4,500+ users. I also built Urlink, a client platform from scratch on Next.js, Supabase, and Netlify, owning requirements, architecture, and deployment. Claude Code and Cursor are my primary development tools, and I use AI-assisted workflows daily to prototype fast and ship production code. I work independently, move quickly in early-stage ambiguity, and own features from database schema through UI.

Experience

FlowSpace.co — **Mar 2024 – Aug 2026**
Full-Stack & AI Engineer (Full-time, Freelance) — *London, UK (remote)*

- Built an AI listing pipeline that takes documents in any format (PDF, web page, photo or spreadsheet), extracts structured data using LLM APIs with agentic orchestration and retrieval, and pushes validated results to the backend after human review. Handles hundreds of sources with different formats.
- Built RAG-backed support agents that answer customer queries against live platform data and escalate to a person on low confidence. Implemented confidence scoring and retrieval quality monitoring.
- Built integrations against customer APIs and booking systems (OfficeRnD, Nexudus), CRM pipelines (Attio, Amplemarket, Swan), and payment flows (Stripe), iterating quickly on customer feedback.
- Took over a live marketplace on a legacy stack and worked with the team to migrate it to a coded Next.js and Laravel product. Scaled from 2,000 to 4,500+ users.
