Motivation letter for Application for Customer Solutions Engineer – Madrid, Spain

Dear Hiring Manager,

I am writing to apply for the Customer Solutions Engineer role at Atmen. Automating green certification compliance for fuels, chemicals and materials is the kind of problem where the software is only half the job: the other half is sitting with an industrial customer, understanding a process that has run on spreadsheets and PDFs for years, and getting them onto something that actually holds. Your posting is clear that this is a delivery and customer role rather than a pure engineering one, and that is the part of my work I want more of.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily work revolves around the exact requirements outlined in your role: taking a business requirement from a client, translating it into a working system, and staying with it through the awkward middle where the real edge cases appear. I utilize workflow orchestration tools (such as n8n) and direct API integration to connect external systems with foundational models like OpenAI and Anthropic's Claude, which means I can build the integration myself rather than only specifying it. Across the freelance work for UltraStrategy, Get2Germany and Clubee, and at FlowSpace, the constant has been client-facing delivery. To be plain about the gaps: I have no background in energy, fuels or regulatory compliance, and my Spanish is not working-level, so I would be operating in English.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through what a first customer implementation looks like at Atmen and where it usually gets stuck.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
