Motivation letter for Application for Forward Deployed Engineer – Rotterdam, Zuid-Holland, Netherlands

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer role at Freeday. The line in your posting about sitting between the client and the product team, and making sure what gets built actually delivers value in practice, describes the job I have been doing for three years without anyone giving it that title. Digital employees are only useful if they slot into a process someone already has, and that fitting is the hard part.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

Concretely, the work you describe is the work I have done. At FlowSpace I sat between the internal team, an external agency and the members, translating what people asked for into what we would build, then building it: the support AI agents, the lead capture and enrichment into the CRM, GTM and outbound automations, and a scraping and parsing tool that increased listings while the platform grew from 2,000 to over 4,500 active users. I built integrations against Office RnD and Nexudus for automated bookings, plus Clubee, Sendgrid, Google APIs and both OpenAI and Anthropic. For UltraStrategy I built an AI data parsing tool in n8n and Eden AI; for Get2Germany, automated workflows. Prototyping fast and explaining it plainly is most of what I do, and I lean on n8n, TypeScript, Next.js and Python depending on what the problem needs.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

Two things stated up front. My degree is a BA in Philosophy, International Studies and Economics from Ca' Foscari rather than Computer Science, AI or Econometrics; I have no CS degree and I would rather you know now. And I am currently based in Venice, not the Netherlands, so this would be a relocation. My Italian EU long-term residence permit means that needs no sponsorship from you. I would be glad to talk through the integrations in detail.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
