Motivation letter for Application for Forward-Deployed CRM Architect – Remote

Dear Hiring Manager,

I am writing to apply for the Forward-Deployed CRM Architect role at GTMBase. Two things in the posting are the reason: being embedded in a client's RevOps team building inside their live system is the shape of work I already do, and running the company on Claude Code as the operating system rather than as a bolt-on is how I work day to day. Fixing the foundation before running campaigns is also the right order, and it is the part most agencies skip.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude, and I script in Python, SQL and TypeScript for data manipulation and custom connectors. At FlowSpace I worked on GTM automations through their CRM alongside the AI agents and data parsing tools I built. I should be straight with you about the must-have: my CRM work has been GTM automation and integration rather than deep HubSpot administration across Sales, Marketing, Service and Operations Hubs, and I hold no HubSpot certifications. The automation, API, webhook and data-integrity side of the role I can do now; the HubSpot platform depth I would be building.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

If the HubSpot depth is a hard gate I understand, but I would be glad to talk if the automation and AI-first side is where you need weight.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
