Motivation letter for Application for AI Engineer – Berlin, Germany

Dear Hiring Manager,

I am writing to apply for the AI Engineer role at Jamie. An AI meeting assistant lives or dies on whether the output is trustworthy enough that someone stops taking their own notes, which makes it a product problem as much as a model problem. That framing is the reason I am applying rather than the salary band in the title.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My work has been prompt engineering and orchestration rather than model training. At FlowSpace I built the support AI agents that ran against real users, which meant dealing with non-determinism honestly: testing for the cases where the model returns something unusable, building the fallback path, and deciding what the system does when it is not confident. I have connected OpenAI and Anthropic APIs into production workflows through n8n and directly, built RAG retrieval over real document sets, and shipped the surrounding product in Next.js and Laravel. I should say plainly that my German is beginner level, and that my agent work has been in n8n and direct API orchestration rather than a Python agent framework, so I would be learning your idioms in the first weeks.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the chance to talk about how you are handling accuracy and user trust in the transcript pipeline.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
