Motivation letter for Application for Applied AI, Forward Deployed Machine Learning Engineer - EMEA – EMEA (Paris / London / Luxembourg / Marseille / Amsterdam / Munich / Lausanne)

Dear Hiring Manager,

I am writing to apply for the Applied AI, Forward Deployed Machine Learning Engineer role at Mistral AI. The forward-deployed side of applied AI is where I have spent my working life so far: sitting with the people who have the problem, building the thing that solves it against real constraints, and staying with it once it is in front of users. A European model provider whose customers deploy on their own terms is the environment I would most want to do that in, and I am applying from Venice with the flexibility to be based in any of your EMEA offices.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models, working in Python and TypeScript, and I build the backend and frontend interfaces around them rather than stopping at the model call. Agentic systems in production, structured outputs, and the unglamorous work of making them fail safely is what my last three years have consisted of. Two things I should state plainly rather than let you find them: my depth is in applied LLM engineering rather than PyTorch and fine-tuning, and my degree is from Ca' Foscari rather than in computer science. What I bring instead is speed at picking up an unfamiliar stack and a track record of shipping in front of customers.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English

proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through a customer deployment you are working on and how I would approach the first two weeks of it.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
