Motivation letter for Application for GTM Automation & Growth Engineer – Berlin / EU remote

Dear Hiring Manager,

I am writing to apply for the GTM Automation & Growth Engineer role at Novosafe. Your posting names n8n, Python scripting, API integration and web scraping in the same paragraph, which is an unusually exact description of what I have actually been doing for the last three years. Most postings that say "automation" mean Zapier and a CRM field update. This one does not, and that is why I am applying.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

On the GTM side specifically: at FlowSpace I built the lead capture and enrichment pipeline into the CRM, the outbound automations, and a scraping and parsing tool that increased the number of listings on the platform. The AI-based data parsing tool I built for UltraStrategy in n8n and Eden AI was a CV parser, but the shape of the problem is the same one GTM engineering has: take messy input from an external source, get it into structured fields, and make the downstream system act on it without a human in the middle. I have wired OpenAI and Anthropic APIs into that kind of loop in production, including handling the cases where the model returns something the next step cannot use.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to walk through the FlowSpace lead pipeline and the UltraStrategy parser in detail if that would be useful.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
