Motivation letter for Application for GTM Engineer – Remote in EU / hybrid Barcelona

Dear Hiring Manager,

I am writing to apply for the GTM Engineer role at Nuitée. The part of the posting that made me apply is that thousands of companies already signed up and started integrating on their own, and nobody has yet built the system that decides which of them matter. That is a plumbing problem before it is a growth problem, and plumbing between APIs, a CRM and a set of automations is what I actually do.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

At FlowSpace I built the lead capture and enrichment pipeline into the CRM, the outbound and GTM automations on top of it, and a scraping and parsing tool that increased the number of listings on the platform. The enrichment work is the closest analogue to what you are describing: take a signal from outside the product, turn it into structured fields on a record, and make something downstream fire off the result without a person in the middle. I build those flows in n8n and by calling APIs directly, and I use Claude and Claude Code daily to build faster rather than to write copy. On the data side I work in Postgres and Supabase and am comfortable with SQL, though I should be straight that I have not used PostHog, Clay or BigQuery specifically.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I am at the bottom of your three to five year band and my GTM work has been one part of a broader engineering job rather than the whole of it, so I would rather you know that up front. I would be glad to walk through the FlowSpace lead pipeline in detail.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
