Motivation letter for Application for Forward Deployed Engineer – London, United Kingdom

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer role at STRATOS Technologies. A strategy operating system that pulls complex, scattered datasets into one place for industrial and Fortune 500 clients only works if someone sits with those clients, understands what they are actually trying to decide, and then builds the integration that makes it possible. That is the work I have spent the last three years doing, and the combination you describe of scalable AI workflows and intricate data integration is the exact pairing my day already consists of: LLM orchestration on one side, connecting messy external systems on the other.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude, working in Python, SQL and TypeScript. Turning a business requirement into a maintainable pipeline is the core of what I did for UltraStrategy and Get2Germany, and the CRM integration work at FlowSpace is directly comparable to the ERP and CRM exposure you list as preferred. I should be straightforward about one gap: I have not worked with PySpark or Palantir AIP specifically, and my distributed-processing experience is with the pipelines I have built rather than with Spark at scale. I pick up new systems quickly, which is most of what my last three years have consisted of, and I would rather say that plainly than let it surface in a first call.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English

proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through a client implementation you have run recently and how I would have approached the integration.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
