Motivation letter for Application for Forward-Deployed Engineer – Remote (European time zones)

Dear Hiring Manager,

I am writing to apply for the Forward-Deployed Engineer role at Tangible. Secondary-transaction infrastructure for private markets is exactly the kind of domain where the software has to meet a process that banks, fund administrators and secondaries teams already run their own way, and where SSO, data mappings and integrations are not a footnote but most of the job. Working at that boundary, and writing clearly about it, is what I want to keep doing.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: configuration, integrations and the glue code between systems, in TypeScript and Python, connecting REST and GraphQL APIs and webhooks, and using orchestration tools (such as n8n) alongside foundational models like OpenAI and Anthropic's Claude where they earn their place. Client exposure has been constant rather than occasional: the freelance work for UltraStrategy, Get2Germany and Clubee each meant sitting with the client, and at FlowSpace I owned a system through a migration while it grew from 2,000 to over 4,500 active users. Being straight about the gap: I have no background in private markets or fund administration, so the domain would be new, though the integration work would not be.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through a client onboarding you have run and where the data mapping usually breaks.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
