Motivation letter for Application for Applied AI Developer – Remote

Dear Hiring Manager,

I am writing to apply for the Applied AI Developer role at dexter health. Reducing administrative load in nursing homes and residential care so that caregivers get time back with patients is a problem where the value is entirely in the last mile: the workflow has to actually fit how a care team works, or it does not get used. That is the kind of AI work I do, and your line about caring less about formal seniority than about speed, ownership and product impact is the reason I am writing rather than filtering myself out.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude, working in Python and TypeScript. Putting LLMs into production systems rather than demos is the whole of my recent work, and I use Claude Code and bolt.new daily as part of how I build, not as an experiment. I should note the obvious gap plainly: I have not worked in healthcare or with clinical data before, so the domain and its compliance constraints would be new to me.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through one of the administrative workflows you are targeting and how I would take it apart.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
