Motivation letter for Application for Senior Full Stack Engineer – Remote (Europe)

Dear Hiring Manager,

I am writing to express my interest in the Senior Full Stack Engineer position at tem. As an AI Solutions and Automation Engineer based in Venice, I am drawn to what tem is building: energy pricing is a market where opacity is effectively the product, and building the infrastructure that makes it legible is worth spending a few years on. Your AI-native approach to how electricity is bought, sold and priced aligns with my professional expertise in rapid prototyping, complex API integration and LLM orchestration.

Over the past three years I have turned abstract business requirements into production features across multiple European technology projects, spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

The stack in your role maps closely onto my daily work: TypeScript and Node on the backend, React on the front end, and the AWS serverless pieces around them. I do my best work as the engineer who owns a slice end to end and talks to the people using it. At FlowSpace I sat between our internal team, an external agency and the members themselves, which meant writing down business logic that existed only in conversations, shipping it, and then fixing what real usage broke. I have also worked across customer-facing portals, billing integrations and developer tooling in previous projects.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the opportunity to discuss how my background in shipping customer-facing platforms and automating complex data workflows can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
