Motivation letter for Application for AI-Driven Applications Developer – Venice

Dear Hiring Manager,

I am writing to express my interest in the AI-Driven Applications Developer position at Arsenalia. As an AI Solutions and Automation Engineer based in Venice, I have been closely following Arsenalia and its growth trajectory. Arsenalia's "Make AI Real" methodology and specifically the strategic transition from standard generative models to dynamic Agentic Enterprise solutions aligns perfectly with my professional expertise in LLM orchestration, rapid prototyping, and complex API integration.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Laravel. Debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude. I thrive in a team environment, prioritizing practical implementation and tangible business value over rigid adherence to specific legacy frameworks.

Furthermore, the job's emphasis on experimentation, "vibe coding," and AI-assisted development speaks directly to my core methodology. I have also completed a project completely built with AI called Urlink, where I utilized AI to architect the platform, implement UIs, and automate client requirements.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. Recently, I oversaw a complex architectural migration from a low-code infrastructure to a robust Next.JS and Laravel stack, ensuring that our rapid prototypes evolved successfully into highly scalable, reliable, and secure enterprise products.

I am also open to learning new systems and techstack. I recently completed a course in Microsoft Co Pilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the opportunity to discuss how my practical background in orchestrating AI capabilities and automating complex data workflows can immediately contribute to your team of experts.

Thank you for your time and consideration.
Sincerely,

Prabhavit Gupta
