Motivation letter for Application for AI Engineer (gn) – Germany, remote

Dear Hiring Manager,

I am writing to apply for the AI Engineer (gn) role at The Quality Group. The posting names Claude Enterprise, ChatGPT Enterprise and n8n as the tools, and describes the job as taking a business requirement all the way to a governed production workflow. That is a precise description of what I have spent the last three years doing, which is rarer in a job advert than it should be.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

Concretely: I build and maintain n8n workflows in production, including the AI-based data parsing tool I engineered for UltraStrategy using n8n and Eden AI, and the automated workflows I built for Get2Germany. At FlowSpace I engineered the support AI agents and the lead capture, enrichment and outbound automations into the CRM, plus a scraping and parsing tool that increased listings on the platform. I have connected OpenAI and Anthropic APIs into those workflows directly, built RAG retrieval over real document sets, and dealt with the part that only shows up in production: what the workflow does when the model returns something the next step cannot use. On the enabling side, the FlowSpace work meant sitting between the internal team, an external agency and the members, so translating a business requirement into something buildable and then handing it over is familiar rather than theoretical.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I should say plainly that my German is beginner level, that I would be relocating to Germany rather than already resident there, and that my governance experience is GDPR-aware practice rather than formal AI governance design. I would be glad to talk through the n8n and agent work in detail.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
