Motivation letter for Application for Forward Deployed Engineer – London, United Kingdom

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer role at Seamflow. The line that made me apply is thinking in customer workflows rather than tickets. Aerospace, healthcare and energy are exactly the settings where the real process lives in someone's head and a spreadsheet, and where the value comes from sitting with that person, deciding what should exist, and putting it in their hands the same week. That is the work I have been doing, at a smaller scale, for three years.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I build production UI in TypeScript with React and Next.JS, implement the backend logic and data models behind it, and I utilize prompt chaining, RAG architectures and orchestration tools (such as n8n) to integrate LLMs and agents from OpenAI and Anthropic into products that customers actually use. Working where the requirements were unclear and evolving describes most of my freelance engagements: UltraStrategy, Get2Germany and Clubee all started as a messy process rather than a spec. At FlowSpace I took over an existing system, debugged it, and carried it through a migration to Next.JS and Laravel while it grew from 2,000 to over 4,500 active users. Honest gaps: my backend work has been more TypeScript and PHP than Python, and I have not worked in aerospace, healthcare or energy.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through a customer workflow you are untangling right now and how I would take it end to end.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
