Motivation letter for Application for Applied AI Engineer – Remote, Europe

Dear Hiring Manager,

I am applying for the Applied AI Engineer role because Dwelly is building agentic infrastructure around real operational workflows rather than treating AI as a standalone feature. That matches the practical automation and product work I have delivered across European startups.

Over the past three years I have turned business requirements into production features across several European technology projects.

At UltraStrategy I built an AI-based CV parsing workflow using n8n and Eden AI, and at Clubee I worked on API integration and QA.

At FlowSpace I built AI support agents, GTM automations and data-parsing tools while helping grow the platform from 2,000 to more than 4,500 users.

My strongest fit is applied AI inside real workflows. I have connected model outputs to product and operational actions and contributed to a live migration from Bubble to Next.js and Laravel. These projects taught me to validate probabilistic outputs, design explicit failure paths, and decide when deterministic software or human review is safer.

I use Claude Code alongside TypeScript, Next.js, Laravel and Supabase, and verify generated changes before shipping them.

I am based in Venice, hold an EU long-term residence permit and am available immediately.

I would welcome the opportunity to discuss how this production-focused approach to agents, evaluation and workflow automation could contribute to Dwelly.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
