Motivation letter for Application for Growth Engineer – Remote

Dear Hiring Manager,

I am writing to express my interest in the Growth Engineer position at Goldsky. As an AI Solutions and Automation Engineer based in Venice, the shape of the role is what drew me: growth engineering at an infrastructure company, where the funnel runs on developers trying a product rather than on advertising, and where the work is wiring systems together so the business can see what is actually happening. Goldsky's focus on making blockchain data usable in real time is a domain I have not worked in, and I would rather say that plainly than pretend otherwise; what I bring is the automation and integration layer around a product like it.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow is close to what this role asks for: prompt chaining, RAG architectures and workflow orchestration in n8n connecting external APIs with foundational models from OpenAI and Anthropic, alongside TypeScript, Next.JS and Laravel. At FlowSpace I owned the growth plumbing directly. I built lead capture and enrichment into the CRM, sales-funnel and outbound automations, AI agents handling customer support, and a scraping and parsing pipeline that increased listings, because supply was the real constraint on activation. The platform went from 2,000 to over 4,500 active users during that period. I have also integrated Office RnD, Nexudus, Sendgrid, Google APIs and several CRMs, which is mostly a statement about being comfortable in someone else's API when the documentation is optimistic.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and

medium-term business travel as project demands.

I would welcome the opportunity to discuss how my background in automation, integrations and growth plumbing could contribute to your team.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
