Dear Hiring Team at ShippyPro,

I am writing to apply for the GTM Engineer position. Your description of someone who builds internal GTM tools, connects APIs across CRM and marketing systems, and experiments with MCP servers and AI-powered workflows reads like my actual day-to-day work.

At FlowSpace I built CRM and GTM automations with n8n that connected Attio (CRM), Amplemarket (outbound), and Swan (payments) into a single pipeline. I also built an AI listing bot that takes documents in any format, drafts structured listings with an LLM, and pushes them to the backend after human review. On the integration side, I connected OfficeRnD and Nexudus booking platforms to the marketplace, and built support agents that answer customer queries against live data. All of this shipped to production and ran daily.

I work across TypeScript, Python, and Node.js, and I use Claude Code and MCP servers as core parts of my workflow, not experiments. I have built AI agents that operate autonomously, handle structured outputs, and integrate with external APIs. The stack overlap with what you describe, from Python and TypeScript to automation platforms and LLM tooling, is direct.

ShippyPro's approach to GTM engineering resonates with me: engineering applied to growth, with a direct line to revenue through the systems you ship. I care about what converts, and I prefer shipping over overthinking.

I am based in Italy, hold an EU Long Term Residence Permit, and am available immediately. I would welcome the chance to discuss how my experience building production AI automations and integrations fits what you are looking for.

Regards,
Prabhavit Gupta
