Dear Hiring Manager,

I am writing to apply for the Full Stack AI Engineer role at Zalion. I build production AI agents that interact with real systems and ship the full-stack code around them, which is exactly what this role calls for.

At FlowSpace I built and operated AI agents that answer customer queries against live platform data, with tool calling and confidence-based escalation to a human. I also built an end-to-end AI listing pipeline that takes documents in any format (PDFs, web pages, photos, emails, spreadsheets), runs multi-step extraction with an LLM, and pushes clean structured data to the backend after human review. These systems run in production against real, messy data sources, not demos.

What draws me to Zalion is the focus on AI agents that do real work in real systems. Automating Source-to-Pay processes with agents that interact with ERPs, email and supplier portals is the kind of applied AI I care about: hard problems around context management, robustness and guardrails, with measurable outcomes for customers. I write TypeScript, Python and Node.js, integrate LLM APIs (OpenAI, Claude) daily, and I am comfortable owning features end to end from prototype to production.

I hold a European Long Term Residence Permit (Italy), am available immediately, and am open to relocating to Munich.

Regards,
Prabhavit Gupta
