Motivation letter for Application for Analytics Implementation Consultant - Europe, Remote

Dear Hiring Manager,

I am writing to apply for the Analytics Implementation Consultant role at Sporty Group. What drew me to this posting specifically is the ownership it describes: curating a tracking schema across front-end and back-end events, with triggers, event parameters and user properties documented, and then being the person other teams come to when an event stops firing correctly. That is a systems and documentation problem as much as an analytics one, and it is close to how I have spent the last three years.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Laravel. Debugging the system, I also partook in go-to-market automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

I want to be straightforward about where I stand against your first requirement. My work has run alongside Google Tag Manager and GA4 rather than at the centre of them: I have not spent three years administering GTM containers at scale, and I would rather you hear that from me now than discover it in a later round. What I do bring is the layer underneath. I am proficient in HTML, CSS and JavaScript and comfortable with how a data layer gets populated and read. I have built and debugged the event and webhook flows that carry conversions into CRMs and third-party platforms, where attribution is only as good as the payload. I have owned the awkward part of that work, which is establishing a testing process with product and engineering so a broken event is caught before a campaign reports on it, and writing the documentation that lets other people use the system without me. Data privacy is not an afterthought for me either; I work under GDPR by default.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. Recently I oversaw a migration from a low-code infrastructure to a Next.JS and Laravel stack, ensuring rapid prototypes evolved into scalable, reliable and secure products.

I am also open to learning new systems and techstack. I recently completed a course in Microsoft Co Pilot and AI agent orchestration, and closing the gap on GA4 and server-side GTM is exactly the kind of thing I would expect to do quickly and properly rather than claim I already had.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. Your core hours of 10am to 3pm local time sit comfortably with mine. I am also fully available for short and medium-term business travel as project demands.

I would welcome the chance to talk about the tracking schema you are building and where the current implementation hurts most.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
