Motivation letter for Application for Founding Engineer (Core) – Amsterdam, Netherlands

Dear Hiring Manager,

I am writing to apply for the Founding Engineer (Core) role at Avery. A hiring intelligence engine where agents source, screen and schedule is a good test of whether agentic systems can be trusted with a decision that matters to someone, and the part I would want to own is exactly what you describe: building across the stack from agent logic through to the interface the recruiter actually uses. I have spent three years on that boundary at a smaller scale.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude, and I build the interface around them in TypeScript with Next.JS and React rather than stopping at the agent. At FlowSpace I took over a system I had not written, debugged it, carried it through a migration to Next.JS and Laravel, and built the AI agents and automated data parsing that supported growth from 2,000 to over 4,500 active users. The freelance work for UltraStrategy, Get2Germany and Clubee was the same shape: a client with a manual process, no spec, and a need for something that works this month.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through where an agent should stop and hand back to a human in a hiring flow, because that is usually the line the product lives or dies on.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
