Motivation letter for Application for AI Platform Engineer – EU/UK Remote

Dear Hiring Manager,

I am writing to express my interest in the AI Platform Engineer position at Duvo. As an AI Solutions and Automation Engineer based in Venice, Duvo's focus on AI agents that automate enterprise work aligns directly with my professional expertise in LLM orchestration, rapid prototyping and complex API integration. The part of that problem I have actually done is the plumbing: getting an agent to work reliably against systems that were never designed for one.

Over the past three years I have turned abstract business requirements into production features across multiple European technology projects, spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around prompt chaining, RAG architectures, and workflow orchestration tools such as n8n connecting external APIs with foundational models like OpenAI and Anthropic's Claude. I have run agents in production for a marketplace with over 4,500 members, integrated Office RnD, Nexudus, CRM and Google APIs, and led the migration of a live product from Bubble.io to Next.JS and Laravel while it was in daily use. The quick version of that migration would have been a rewrite with a month of broken features; instead I documented the business logic first, because most of it existed only in people's heads, then moved it piece by piece.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the opportunity to discuss how my practical background in orchestrating AI capabilities and automating complex data workflows can immediately contribute to your team.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
