Motivation letter for Application for AI software engineer – Remote, EU +/- 2hrs

Dear Hiring Manager,

I am writing to apply for the AI software engineer role at EggAI. Your framing of the problem, helping large organisations move AI from prototype into production, is the gap I have spent three years working in from the other side, as the person actually shipping the thing rather than the person specifying it. Most AI work dies between the demo and the first week in front of real users, and the reason is almost never the model.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

The parts of your requirements I can speak to honestly are the production ones. At FlowSpace I built the support AI agents that ran against real users, dealt with latency and reliability, and built the fallback path for when a model returns something the next step cannot use. I have done prompt chaining, RAG retrieval over real document sets, function calling and structured outputs, and direct integration of OpenAI and Anthropic APIs into workflows that other systems depend on. For UltraStrategy I built a CV parsing tool in n8n with Eden AI; for Get2Germany, automated workflows with Google APIs. My languages are Python for parsing and integration work and TypeScript across Next.js and Laravel products, and I led a migration from Bubble.io to Next.js and Laravel on a live product while it grew from 2,000 to over 4,500 users.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

The gaps are real and I would rather name them than have you find them. I have not used Braintrust or Langfuse, and my evaluation practice has been hand-built regression checks rather than a proper eval suite with model-graded or reference-based metrics. I have not run formal prompt versioning or deployment pipelines. And the body of your posting says Senior Engineer while the stated bar is two years of core LLM engineering; I am at about three years with no CS degree, so if Senior is the real requirement I am not your candidate and I would rather say so. If the two-year bar is the real one, I would like to talk.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
