Motivation letter for Application for MarTech Engineer – AI & Automation (Remote, Europe)

Dear Hiring Manager,

I am writing to express my interest in the MarTech Engineer, AI & Automation position at Oh. As an AI Solutions and Automation Engineer based in Venice, the responsibilities in your job description are the work I have been doing for the last two years, with a considerably larger surface to do it on: marketing and revenue systems wired together with AI agents in the middle of them.

Over the past three years I have turned abstract business requirements into production features across multiple European technology projects, spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: workflow architecture in tools like Make.com and CRM platforms, AI agents deployed with orchestration frameworks, prompt chaining and RAG architectures, and Python or Node scripting to connect external APIs with foundational models like OpenAI's GPT and Anthropic's Claude. At FlowSpace I built lead capture and enrichment into the CRM, sales funnel and outbound automations, AI agents handling customer support, and the tracking and reporting around them. I am most useful in the gap between a marketing idea and a system that performs it reliably.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the opportunity to discuss how my practical background in orchestrating AI capabilities and automating complex marketing and revenue workflows can immediately contribute to your team.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
