Motivation letter for Application for Forward Deployed Engineer (f/m/x) – Berlin, Germany

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer role at Otherworldly. What drew me to the posting is that the job is defined by the boundary itself: sitting with the booking and artist-care teams, watching how the work actually happens, and turning the most manual parts of their day into deployed software. An AI-native talent management and booking company running a real roster, a database of 250,000+ bookers and algorithmic pitching systems is exactly the kind of environment where LLM orchestration, rapid prototyping and complex API integration stop being abstractions and start being the product.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude, working in Python and TypeScript. Integrating LLMs into real products through API calls, prompt design and structured outputs is what my last three years have consisted of, and the strong-plus you list, building internal tools, workflow automation and CRM and outbound systems, is a fair description of most of what I have shipped. At FlowSpace the GTM automations ran through the CRM; the freelance work for UltraStrategy and Get2Germany was internal tooling and workflow automation for people who had been doing that work by hand. I am comfortable taking a problem end to end and shipping in days rather than sprints.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English

proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the chance to talk through how I would approach the first workflow you would want removed from someone's day.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
