Motivation letter for Application for Forward Deployed Engineer – Berlin, Germany

Dear Hiring Manager,

I am writing to apply for the Forward Deployed Engineer role at Zauber. The part of the posting that made me apply is the integration surface: ERP, TMS, SFTP and event queues are exactly the kind of systems where the customer's real process lives, and where a clean integration is worth more than a clever feature. Sitting with the customer, learning how their operation actually runs, and then building the thing that removes the friction is the work I want to keep doing.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I build in TypeScript and Node.JS across Next.JS and React, connect REST and GraphQL APIs and webhooks between systems, and I utilize prompt chaining, RAG architectures and orchestration tools (such as n8n) to wire foundational models like OpenAI and Anthropic's Claude into real products rather than demos. At FlowSpace I took over an already built system, debugged it, and saw it through a migration to Next.JS and Laravel while it scaled from 2,000 to over 4,500 active users. Being straight about gaps: my infrastructure work has been deployment-level rather than deep Terraform, and I have not integrated a TMS specifically.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would be glad to talk through one of your customer integrations and where you have seen them break.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
