Motivation letter for Application for Forward Deployed AI Engineer (m/f/d) – Milan / Munich / Berlin / Amsterdam / London / Paris

Dear Hiring Manager,

I am writing to apply for the Forward Deployed AI Engineer role at OMMAX. Sitting with client teams, translating a messy business problem into something that runs in production, and then staying with it through adoption and optimisation is the work I want and the work I have been doing. OMMAX linking strategy to actual implementation, rather than stopping at the recommendation, is the part that made me apply, and having Milan as one of your offices matters to me directly since I am based in Venice.

Over the past three years, I have successfully transformed abstract business requirements into production-ready features across multiple European technology projects spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

My daily engineering workflow revolves around the exact requirements outlined in your role: I utilize prompt chaining, RAG architectures, and advanced workflow orchestration tools (such as n8n) to connect external APIs with foundational models like OpenAI and Anthropic's Claude, in Python and TypeScript, with structured outputs and error handling because the alternative fails in front of a client. I have built and shipped modern web applications in Next.JS and React, and I have deployed to cloud environments. Two honest gaps: my orchestration has been through n8n and direct API work rather than LangChain, LangGraph or LlamaIndex specifically, and my degree is from Ca' Foscari rather than in Computer Science. I learn frameworks quickly, which is most of what the last three years have consisted of.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and

medium-term business travel as project demands.

I would be glad to talk through how I would take one of your client problems from discovery to something deployed.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta
