Motivation letter for Application for Product Manager [IC4] – Remote

Dear Hiring Manager,

I am writing to express my interest in the Product Manager [IC4] position at Sourcegraph. As an AI Solutions and Automation Engineer based in Venice who has spent the last two years owning product as well as building it, Sourcegraph's work on code intelligence and AI-assisted development sits close to how I already work: I use AI coding assistants daily and have shipped features on top of them rather than around them.

Over the past three years I have turned abstract business requirements into production features across multiple European technology projects, spanning different countries and sectors; from a sports management platform in Luxembourg to strategic consultant platforms in France and Spain.

Operating extensively as a freelance AI Solutions Developer, I engineered AI-based data parsing tools using n8n for UltraStrategy, automated complex workflows for Get2Germany, and executed rigorous quality assurance and API integrations for Clubee.

During my tenure at FlowSpace (based in London), I took over an already built system and managed it until its eventual migration to Next.JS and Laravel. Alongside debugging the system, I also partook in GTM automations using their CRM. I engineered AI agents and automated data parsing tools that directly contributed to scaling the platform from 2,000 to over 4,500 active users.

At FlowSpace I was the person between the business requirement and the shipped feature. That meant documenting product and business logic that existed only in conversations, coordinating an external agency alongside our internal team, running QA, and deciding what to build next against what users were actually doing. The platform grew from 2,000 to over 4,500 active users during that period. I am comfortable in B2B contexts with technical customers, and I have worked as an engineer for three years, which means I can hold a specification conversation with the people who will implement it.

I extensively leverage AI coding assistants like Claude Code and bolt.new alongside low-code platforms and modern frameworks (TypeScript, Next.JS, Laravel, Supabase) to rapidly test hypotheses and deploy MVP architectures. I am also open to learning new systems and tech stacks; I recently completed a course in Microsoft Copilot and AI agent orchestration.

As a graduate of Ca' Foscari University, I have been living in Venice for 5 years, hold a European Long-Term Residence Permit requiring no visa sponsorship, and have the professional English proficiency required for international collaboration. I am also fully available for short and medium-term business travel as project demands.

I would welcome the opportunity to discuss how my combination of hands-on engineering and product ownership can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Prabhavit Gupta

I hereby authorize the processing of my personal data contained in this document in compliance with the European General Data Protection Regulation (EU Regulation 2016/679) and Italian Legislative Decree 196/2003, as modified by Legislative Decree 101/2018, for the purposes of recruitment and selection.
