Application: Junior Agentic DevOps Engineer, 2N (Prague)

Dear 2N Hiring Team,

I am applying for the Junior Agentic DevOps Engineer role. Bringing AI agents into how engineers build and test, and automating the repetitive parts, is what excites me most about this position.

As Lead Developer at FlowSpace I wrote Python automation that scrapes web content, extracts records with the Claude and OpenAI APIs using structured outputs, routes them through human review and pushes them to an API, adding 900+ listings. I built a listing sync across 9 operators with staged approval and a dry-run mode, so changes were checked before they went live, and n8n workflows for data sync and support queries. I build with Claude Code, work with MCP and agent orchestration, and use GitHub for version control. Earlier, at Clubee, I did unit testing and quality assurance of new features.

On the gaps: I have not maintained CI/CD pipelines, and I have no Docker, container, Yocto, Meson or Gerrit experience. I have no C/C++ or embedded systems background, and I have not worked with firmware. These are the areas I would expect to learn on the job. I do not speak Czech; I work in English (C1).

I am based in Venice, hold a European Long Term Residence Permit (no sponsorship needed in the EU), and am available immediately. I am open to relocating to Prague. Thank you for considering my application.

Kind regards,
Prabhavit Gupta
